

PREFACE

The Ministry of Housing Urban Poverty Alleviation, Government of India has launched Housing For All Mission (Urban)/ Pradhan Mantri Awas Yojana (PMAY) - "Housing for All by 2022" a comprehensive urban housing scheme to achieve the objective that "By the time the Nation completes 75 years of its Independence, every family will have a pucca house with water connection, toilet facilities, 24x7 electricity supply and access". The scheme seeks to address the housing requirement of urban poor including slum dwellers and will be implemented through four major components/ verticals, giving option to beneficiaries & ULBs. The four components of the

PMAY are:

- ☑ Slum rehabilitation of Slum Dwellers with participation of private developers using land as a resource
- ☑ Promotion of Affordable Housing for weaker section through credit linked subsidy
- ☑ Affordable Housing in Partnership with Public & Private sectors
- ☑ Subsidy for beneficiary-led individual house construction

The PMAY will be implemented as a Centrally Sponsored Scheme except the credit linked subsidy component, which will be implemented as a Central Sector Scheme. The scheme also prescribes certain mandatory reforms for easing up the urban land market for housing, to make adequate urban land available for affordable housing. Pradhan Mantri Awas Yojana (PMAY) envisages "Housing For All by 2022" by encouraging ULBs to tackle the problem of urban poor housing in a definitive manner. The Housing For All Plan of Action (HFAPoA) is an important instrument and the foundation for cities to attain the objective of PMAY. It is a citywide plan of action, which will provides the demand of housing by eligible beneficiaries in the ULB along with the interventions selected out of four verticals of the PMAY. For availing financial assistance under HFAM/PMAY from Central Govt. of India, the State/ULBs are required to prepare city-wise Housing For All Plan of Action (HFAPoA), Annual Implementation Plan (AIP) and Detailed Project Reports (DPRs) by carrying out certain preparatory exercise (i.e. door to door survey/collection of requisite data/information, data entry, assessment of urban poor status, devising development options for beneficiaries for verticals etc.).

Introductory Note by Chairman

It is a great pleasure and I state that the briefing short history of Tufanganj Municipality. It is a small urban town. It has 12 wards & 2.49 Sq Km in area. The population is about 20999 at present as per census 2011 [Tentative] (19310 as per census 2001).

Tufanganj Municipal town is under the administrative Jurisdiction of Cooch Behar District. The Town Tufanganj is situated at a distance of 24 Kms. East of the District town.

It is surrounded by the state of Assam in the East, Doors

in the Northern side, Bangladesh southern part, Siliguri and Tufanganj in the western side of Tufanganj Town. In the eastern side one major river Raidak is passing through the Tufanganj Town.

The problem is one thing that the people from village towards the cities and pressure are on the Tufanganj Municipal area and the financial background is very low and it is a barrier from one part of development the municipal work at every stage. Tufanganj Municipality is an 'E' Category municipality. Here is no large, medium and small scale industry and it is very small sub- divisional town in Cooch Behar district. The municipality has the local govt. And its responsibility to increase the development work i.e. repair of road, water supply, Drainage System, Clearing of garbage, Street Light, Better Transportation System and to get better social environment to the Civic People of this town from our small capacity in every aspect. We need sufficient fund for comprehensive job to fulfilment our commitments to the citizen of Tufanganj Municipality to better civic service for our plan.

This document has depicted the basic need of the Tufanganj Municipality town as a whole and has identified various project so that prioritised implementation of the identified scheme will ultimately lead Tufanganj town towards planned development by way of accessing various Central and State govt. fund as well as utilising our own revenue in order to translate the dream of improved into reality.

We are now preparation of DPR (Details Project Report) for the year 2019-20 and our target total beneficiaries 279 for BLC total project cost is Rs. 1129.39 Lakh.

(Para 14.5 of the Guidelines)

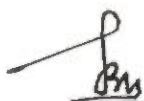

Format for Project under Beneficiary Led Construction Or Enhancement

1	Name of the State:	:	West Bengal						
2	Name of the District:	:	Coochbehar						
3	Name of the City:	:	Tufanganj						
4	Project Name:	:	Hfa-Tufanganj -2019-20						
5	Project Code:	:	19801647054N0						
6	State Level Nodal Agency:	:	State Urban Development Agency						
7	Implementing Agency/ ULB	:	Tufanganj Municipality						
8	Date of Approval by State Level Sanctioning and Monitoring Committee (SLSMC)	:							
9	No. of location covered in project: No of Slum Area Covered & No of Non Slum Area Covered	:	Name of Location	No. of beneficiaries	Whether Slum / Non-Slum	If Slum, then Slum type	If slum, whether it gets completely rehabilitated		
		:	TUFANGA NJ MUNICIPAL AREA	279	Covering both Slum & Non-Slum area	Notified	No		
10	Project Cost (Rs. In Lakhs)	:							
11	No. of beneficiaries covered in the project	:	GEN	SC	ST	OBC	Total	Minority	Person with Disability
		:	153	66	1	59	279	3	
12	Whether beneficiary have been selected as PMAY Guidelines?	:	Yes						
13	No. of Houses constructed / acquired. Please specify ownership (Any of these)	:	Joint	Female	Male	Transgender			
		:							
14	No. of beneficiaries covered in the project	:	Male	Female	Transgender				
		:	194	85					
15	Whether it has been ensured that selected beneficiaries have rightful ownership of the land ?	:	Yes						
16	Whether building plan for all houses have been Approved?	:	Yes						
17	i. GoI grant required (Rs. 1.5 lakh per eligible beneficiary)	:	418.50						

	(Rs. in Lakhs)		
	ii. State grant, (Rs. in Lakhs)	:	589.81
	iii. ULB grant (Rs. in Lakhs)	:	51.34
	iv. Beneficiary Share (Rs. in Lakhs)	:	69.75
	v. Total (Rs. in Lakhs)	:	1,129.39
18	Whether technical specification / design for housing have been ensured as per Indian Standards / NBC/ State Norms?	:	Yes
19	Whether it has been ensured that balance cost of construction is tied up with State Grant, ULB Grant & Beneficiary Share ?	:	Yes
	Whether trunk and line infrastructure is existing or being provisioned ?	:	
	i. Water Supply	:	Yes
	ii. Sewerage	:	No
	iii. Road	:	Yes
	iv. Storm Water Drain	:	Yes
	v. External Electrification	:	No
	vi. Solid Waste Management	:	No
	vii. Any Other	:	No
	viii. In case, any infrastructure has not been proposed, reason thereof.	:	No
20	Whether disaster (earthquake, flood, cyclone, landslide etc.) resistant features have been adopted in concept, design and implementation of the project ?	:	Yes
21	Whether Demand Survey Completed for entire city ?	:	Yes
22	Whether City-wide integrated project have been formulated ? If not reasons thereof ?	:	Yes
23	Whether validation with SECC data for housing condition conducted ?	:	Yes
24	Whether Direct Benefit Transfer (DBT) of fund to individual bank account of beneficiary ensured in the project ?	:	Yes

25	Whether there is provision in DPR for tracking/monitoring the progress of individual houses through geo-tagged photographs ?	Yes
26	Whether any innovation/cost effective / Green technology adopted in the project?	Yes
27	Comments of SLAC after techno economic appraisal of DPR	Project covers the most needy beneficiaries
28	Project brief including any other information ULB/State would like to furnish	The project covers all wards
29	Project Submission Date to SLSCM	

It is hereby confirmed that State/UT and ULB have checked all the beneficiaries as per guidelines of HFA. It is also submitted that no beneficiary has been selected for more than one benefit under the Mission including Credit Linked Subsidy Scheme (CLSS) component of the Mission.

opportunities and alleviation of poverty throughout the State. SUDA is a Society registered under the West Bengal Societies Registration Act, 1961.

Funding Pattern of PMAY

Support from Central Government shall include -

- ☐ 1.5 LAKHS of total cost of dwelling unit
- ☐ State + ULB to bear the cost of infrastructure
- ☐ State share for infrastructure to be minimum 5%
- ☐ Cost of infrastructure 10 % of sum total cost of dwelling unit
- ☐ Cost of capacity building 5 % of sum total cost of dwelling unit

Approvals & Release of Funds

- ☐ Releases and approvals to be on the basis of DPRs which need to be submitted with approval of State Level Sanctioning and Monitoring Committee.

- ☐ Innovative projects to be considered for sanction even in the preparatory stage.

- ☐ Central Funds to be released in 3 installments to the State Governments/SLNAs; central assistance under different components will be released to the state / UTs after the approval of CSMC and with concurrence of the integrated Financial Division of the Ministry. Central share would be released in 3 installment of 40%, 40% and 20% each.

Project Justification

For the following reasons Tufanganj Municipality selected the slums namely mentioned below as first project for preparation of DPR under HFAPoA (PMAY)

Table:- Status of Selected Slums during 2015-2016

Sl. No.	Name of the Slums	Ward No.	Slum Code	Status	Land	Age in years	National High Way	Status of Houseings	Majority	Private
1	Saraj Mukherjee Colony	1	10001	The condition of living in the slum is unhygienic	Land belongs to the ULB	20	The National Highway is 2 kms away	Major population is living in huts, made of dharma / bricks with tin sheets and asbestos/tile on roof	Majority are non-motorable Pucca and few are non-motorable Kutchha.	Private

PMAY(Housing for All): Tufanganj Municipality

Chairman

Tufanganj Municipality

☐ Innovations in planning, demonstrating integrated livelihoods, shelter and services; or convergence

☐ Innovative or cost effective and green building design and technologies

☐ Financial innovations in delivering the city/state wide programme
Aims and Objectives Vision

The mission seeks to address the housing requirement of urban poor including slum dwellers through following programme verticals:

- Slum rehabilitation of Slum Dwellers with participation of private developers using land as a resource
- Promotion of Affordable Housing for weaker section through credit linked subsidy
- Affordable Housing in Partnership with Public & Private sectors
- Subsidy for beneficiary-led individual house construction

Objectives:-

The project has been designed keeping in mind the following objectives.

- ☐ Integrated development of all existing slums, notified or non-notified, i.e., development of infrastructure and housing in the slums/rehabilitation colonies for the slum dwellers/urban poor, including rental housing.
- ☐ Development/improvement/maintenance of basic services to the urban poor, including water supply, sewerage, drainage, solid waste management, approach and internal road, street lighting.
- ☐ The Creation of affordable housing stock, including rental housing with the provision of civic infrastructure and services, on ownership, rental or rental-purchase basis.
- ☐ Encouraging Public Private Partnership by having pay and use toilets and educate the slum dwellers for keeping the environment clean and hygienic.

State PMAY Mission Director

The Nodal Ministry and National Mission Directorate is Ministry of Housing & Urban Poverty Alleviation, Government of India.

The Nodal Department for West Bengal is Municipal Affairs Dept. (M.A. Department), Government of West Bengal. The state level Nodal Agency is State Urban Development Agency (SUDA) under M.A. Department. State Urban Development Agency was set up in 1991 with a view to ensuring proper implementation and monitoring of the centrally assisted programmes for generating employment

MED, GoWB

PMAY(Housing for All): Tufanganj Municipality

Chairman
Tufanganj Municipality

and financing, which would ensure that adequate fresh housing stock and services get created on an ongoing basis to address both current and future needs of cities.

- ☐ An integrated approach covering shelter, services and livelihoods for poor slum communities.

The duration of Pradhan Mantri Awas Yojana (PMAY) 2015 TO 2022

iv. Eligible Components of the PMAY:

A EWS beneficiary family will comprise husband, wife and unmarried children.

The beneficiary family should not own a pucca house (an all weather dwelling unit)

either in his/her name or in the name of any member of his/her family in any part of India to be eligible to receive central assistance under the mission.

EWS households are defined as households having an annual income up to Rs.3,00,000 (Rupees Three Lakhs). States/UTs shall have the flexibility to redefine the annual income criteria as per local conditions in consultation with the Centre.

Projects pertaining to the following will not be considered for support under PMAY:

1. Water connection
2. Toilet facilities
3. 24 x 7 Electric facilities
4. Roads

Need for Projects

The projects are needed to fully understand and develop redevelopment models that can be replicated in the city with benefits. One of the key objectives of developing The Projects is to incentivize innovation and encourage new approaches and solutions that can demonstrably improve the quality and quantity of shelter and services for the poor.

Such innovation could encompass:

Projects with strong community participation i.e. Slum upgradation/redevelopment projects initiated/spearheaded by the community; or with their demonstrable involvement and participation in design, planning and implementation

- ☐ Creation of fresh rental housing stock and transit shelters

- ☐ New models of public-private partnerships whereby the private sector can be encouraged to take up affordable housing for the EWS/LIG

MED, GoWB

PMAY(Housing for All): Tufanganj Municipality

Chairman

Tufanganj Municipality

would be helpful for community mobilization to pick as many canvassers from the sourced slum or nearby slum pockets;

9. Collection of bio-metric identification data of slum dwellers based on the above survey (subject to guidelines issued by Unique Identity Authority of India (UIDAI));

10. Entry of data from Slum Surveys in the web-enabled MIS application (to be provided by Ministry of HUPA), compilation and collation of data, preparation of Slum-wise, City and State Slum Survey Database and Baseline Reports. The MIS will assist in developing a robust Slum and Slum Households Information System. (Guidelines and software for development of the MIS will be issued by the Ministry of HUPA);

11. Integration of Slum MIS with GIS Maps to enable the preparation of GIS-enabled Slum Information System that is to be used for the preparation of meaningful Slum.

12. Development Plans and Slum-free City Plan using a city-wide/zone-based

approach.(Guidelines and software for development of GIS platform and its

integration with the MIS will be issued by the Ministry of HUPA);

13. Preparation of Slum-free City Plan should be based on the development plans for all slums and

strategies for the prevention of future slums, including reservation of land and housing for the urban poor. The Plan should contain timeline of activities for achieving slum-free city, phasing information and financial estimates against each of the activities

Introduction to Proadhan Mantri Awas Yojana (PMAY)

Pradhan Mantri Awas Yojana (PMAY), a path breaking scheme for the slum dwellers and urban poor envisages a 'Pucca house to every family' through encouraging States to tackle the problem of slums in a holistic manner. It calls for a multi-pronged approach focusing on:

☐ Bringing existing slums within the formal system and enabling them to avail of the same level of basic amenities as the rest of the town.

☐ Redressing the failures of the formal system that lie behind the creation of slums.

☐ Tackling the shortages of urban land and housing that keep shelter out of reach of the urban poor and force them to resort to extra-legal solutions in a bid to retain their sources of livelihood and employment.

☐ Enactment of a set of reforms at the state and city level related to inclusive planning, regulation

The preparation of HFAPoA will broadly involve Slum Development/Rehabilitation Plans based on

a. Survey of all slums – notified and non-notified;

b. Mapping of slums using the state-of-art technology;

c. Integration of geo-spatial and socio-economic data; and

d. Identification of development model proposed for each slum.

1. Base maps to an appropriate scale would be a pre-requisite for the preparation of Slum Development Plan/Slum-free City Plan. States/UTs may need to proceed in the following steps for the preparation of Slum-free City Plans.

2. Securing CARTOSAT II/latest satellite images from NRSC/ISRO and preparation of base maps for the whole city and its fringes using the images;

3. Identification and inventory of all slum clusters of all descriptions in the urban agglomeration with the help of satellite image and other available data;

4. Inventory of all possible vacant lands in each zone of the urban agglomeration that could be used for slum development/rehabilitation development purposes;

5. Development of Slum Map of every slum within the city and its fringes using GIS with CARTOSAT II images, ground level spatial data collected through total station survey, collating spatial information with respect to plot boundaries, network of basic infrastructure like roads, sewerage, storm drainage and water lines, etc and superimposing this on the satellite image and importing them into GIS platform as the first step towards the preparation of Slum Development Plans and Slum Free City Plan.

6. This may be undertaken with the help of technical partners of NRSC/ ISRO/other technical institutions/agency.

7. Identification and engagement of Lead NGO/CBO to guide and anchor community mobilization for the purpose of slum survey, (May be more than one NGO/CBO in different slum zones) of the city. These Lead NGOs/CBOs should also be associated in slum survey operations and dialogues for preparation of slum level development plans;

8. Conduct of Slum Survey based on the detailed formats (with or without changes) prepared by the Ministry of Housing & Urban Poverty Alleviation with the help of National Buildings Organization (NBO) - after due training of trainers, training of survey personnel /canvassers and canvassing. It

0-10% ■ 10-20% ■ 20-30% ■ 30-40% ■ 40-50% ■ 50-60% ■ 60-70% ■ 70-80% ■ 80-90% ■ 90-100%

affordable housing stock already available in the city as Census data suggests that large number of houses are vacant.

Bank account number and Aadhaar number/Voter ID card/any other unique identification details of intended beneficiaries or a certificate of house ownership from Revenue Authority of beneficiary's native district will be integrated in the data base of HFAPoA for avoiding duplication of benefit to one individual family. Beneficiaries is validated by ULBs thereby ensuring their eligibility at the time of preparation of the projects and approval of projects.

On the basis of HFAPoA, States/Cities subsequently prepare the Annual Implementation Plans (AIPs) dividing the task upto 2022 in view of the availability of resources and priority. For larger cities, HFAPoA and AIPs is prepared at sub-city (ward/zone etc.) level with the approval of concerned State/UT Government. The result of demand survey, draft HFAPoA and draft AIP is discussed with the local representatives including MLAs and MPs of that area so that their views are adequately factored in while finalising the plans and beneficiary list.

Cities which have already prepared Slum Free City Plan of Action (SFCPoA) or any other housing plan with data on housing, utilise the existing plan and data for preparing "Housing for All Plan of Action" (HFAPoA). Houses constructed under various schemes should be accounted for while preparing HFAPoA

NSDP is a centrally assisted slum development program. NSDP is mainly for improvement in the environment in the slums as a broader objective through provision of infrastructure facilities and shelter for improving living conditions in the slums.

V. Valmiki Ambedkar Awas Yojana (VAMBAY): VAMBAY is a central Government scheme to provide housing to the poor. Under VAMBAY scheme, an amount of Rs. 50,000 is extended to a beneficiary in a city with more than 10 lacs population while in the cities having population less than 10 lacs, each beneficiary gets Rs. 40,000/- fifty percent of the amount is central government grant while the rest could be taken as loan from HUDCO/ other nationalized banks/ state government/ urban local bodies.

VI. Integrated housing and slum development program (IHSDP): IHSDP was under Jawaharlal Nehru Urban Renewal Mission (JNNURM) beginning from the year 2008-2006. The major objectives for the IHSDP program are:-

- ☐ Focussed attention to integrated development of basic services to the poor. The basic services include security of tenure at affordable price, improving housing, water supply and sanitation.
- ☐ Secure effective linkages between asset creation and asset management so that the basic services to the urban poor created in the cities, are not only maintained efficiently but also become self sustaining over time.

HFAPOA and Proadhan Mantri Awas Yojana (Housing for All)

To give pucca house for every family is currently on the global agenda. One of the Millennium Development Goals (MDGs) is to 'achieve significant improvement in the lives of slum dwellers, by 2022. Similar goals are set forth by Pradhan Mantri Awas Yojana in 2022, to create pucca house for every family.

ULB undertake a demand survey through suitable means for assessing the actual demand of housing. While validating demand survey, Cities should consider possible temporary migration from rural areas to the city just to take advantage of housing scheme and exclude such migrants from list of beneficiaries. On the basis of demand survey and other available data, cities prepare Housing for All Plan of Action (HFAPOA). HFAPOA should contain the demand of housing by eligible beneficiaries in the city along with the interventions selected out of four verticals. The information regarding beneficiaries is collected by ULB in suitable. While preparing HFAPOA, ULB and Implementing Agencies should also consider the

The projected slums and existing scenario of infrastructure:

54 nos Slums and 7 Non Slum have been selected as a First Project under PMAY scheme by Tufanganj Municipality in consultation with the state level Nodal Agency - The State Urban Development Agency (SUDA) under M.A. Department, GoWB.

National Missions for Slum Development and Poverty Reduction

i. The Government of India is committed to creating a slum free India as part of the Jawaharlal Nehru National Urban Renewal Mission (JNNURM) sub mission on Basic Services for the Urban Poor (BSUP). More recently it has also launched the Pradhan Mantri Awas Yojana (PMAY) for providing Housing for All (HFA) by 2022 when the Nation Complete 75 years of its independence.

ii. **Jawaharlal Nehru National Urban Renewal Mission (JNNURM) :** JNNURM is a reform-linked urban development and slum upgrading program. Under JNNURM, the Government of India has been providing central assistance to 65 metro and large cities to invest in infrastructure improvements with governance reforms under sub mission on Urban Development.

iii. **Swarna Jayanti Shahri Rozgar Yojana (SJSRY) :** SJSRY is a centrally sponsored program and it mainly emphasizes on the poverty reduction through employment generation. Main target groups of the program are: Urban poor, Women, SC/ST, Disabled etc.

iv. **National Slum Development Program (NSDP):**

PMAY(Housing for All): Tufanganj Municipality

- ❖ Tufanganj has uneven distribution of slums in its 12 wards with 3 wards having 6 or more than 5 slums, while, in other wards, number of slums is 4 or less than .
- ❖ Out of total 54 slums, based on status, population and area is provided in Annexure B-1.
- ❖ Out of total 54 slums, 6 slums are non-notified slums.
- ❖ Average age of the slums is around 20 years.

Road Coverage and Condition

- The Tufanganj Municipal area is well linked to different cities of Coochbehar and part of Tufanganj district. Besides, the Area is also connected to these areas by national highways. The NH31 is passing through the southern part of the Municipal area has enhanced the connectivity to the nearest towns of the district and the state.
- **City level road network:** The Tufanganj Municipal Area has approximately 63% roads, which is much less than any small sized town. With the rapid growth of Urbanization of the Coochbehar region, the population of Tufanganj Municipal Area is increasing day-by-day. In coming future, the percentage of present roads will not be able to cope up with increasing population.

1.5. Assessment of Present Status of Slums

With an objective to formulate appropriate Slum Development Model for each of the slums, availability of latest and reliable baseline data on all the slums is instrumental. This baseline data encompassing indicators including socio-economic, geographical/spatial, physical etc. shall help develop an overall portrait of the slums in Tufanganj. This shall help in identifying development need for slums and formulating slum specific development strategies.

As on September 2015, the population of Tufanganj was 23623 of which number of persons residing in slums are 10157, which is about 48.36% of the total population. As per the USHA total household in 54 slums are 2635 and as per demand survey for housing for all by 2022 undertaken as part of preparation of HFAPoA and validated by ULB and community, 1205 household living in semi pucca house and 1285 household living in kucha house. On the other hand 231 household are living in non-slum area having semi pucca and katcha house. Out of 231 household 104 household are living in Katcha House and 127 household are living in Semi-Pucca House. From present Demand Assessment survey for Housing for all (HFA), it is noticed that 2721 household covering under this project. Out of these 2721 houses, 2690 houses will be constructed through "Beneficiary-led-Construction" and 31 houses will be constructed through "Credit to Link Subsidy". Under "Beneficiary-led-Construction" each beneficiary will get 1.5 lakh from central assistance.

Ward wise slum population and number of households are presented in the table below:

[Signature]

Table 11: Benchmarks: Sewerage and Sanitation in Tufanganj as on 2011

Sewerage & Sanitation Services	Benchmark	National Average	Current Service Level	Benchmarks in Tufanganj
Toilet Coverage	100%	85.8	100%	
Sewerage network coverage	100%	48.5	0%	
Waste water collection efficiency	100%	41.9	0%	
Wastewater treatment adequacy	100%	48.8	0%	
Quality of wastewater treatment	100%	58.8	0%	
Extent of reuse & recycling of treated MSW	20%	6.8	10%	
Cost recovery - waste water	100%	38.3	0%	
Collection efficiency	90%	42.5	0%	
Complaints redressal	80%	76.4	0%	

Source: MoUD, Gol and Tufanganj Municipality

Above table clearly shows though toilet coverage of the town is reasonably good, but lot of interventions are required to improve sanitation and there is no household level drainage facility leading to unhygienic environment in slums.

Solid Waste Management

With the advent of the age along with population pressure region are facing huge problems regarding their various Infrastructure service. In the last century up to 70's the amount of solid wastes generated in this Municipal area were simply thrown in the vacant lands. The type of these wastes are mainly organic i.e. easily decomposable. Solid wastes collected from markets are used for dumping to fill up the low-lying areas.

But gradually with the increase in population, the quantity of generated wastes increased at an alarming rate. The use of non- biodegradable materials like plastics has multiplied the problems regarding disposal of solid wastes in the municipal area. As a result, to keep the environment healthy, from 1980, vats at different locations, dustbins, handcart etc. came into existence

MED, GoWB

Drainage and Sanitation

The drainage network of the Municipality is 97 km. in total length and is mainly of two types- Kancha and Pucca (Length of Kancha drain – 51.4 & pucca drain – 45.6km). The topography of the town helps very much in natural drainage. The major portion of the town is situated on a ridge which gradually slopes away on either side towards east and west where there are low lying areas. The soil is high permeable nature. The greater part of rain water is absorbed quickly by the ground itself and the remaining flows as surface run-off following the natural gradient. Tufanganj Municipality has constructed shallow surface drains on one side of the road which carry water and discharge the same into low lying area

Present status: At present there is no underground sewerage system in Tufanganj Municipal area. The type of latrines used here are mainly of three types

- **Septic Tank:** Generally the middle class people of the Municipal area using this type of system. Approximately 70% to 75% of household are covered under this system.
- **Two Pits pour Flash Latrine:** These are the new system of sanitation, which has replaced insanitary privies in slum areas. The RAY and allied schemes for these latrines have not only uplifted the sanitation standard of the slum dwellers but has also succeeded partially to generate awareness regarding sanitation among the people. 20% to 15 % of households are covered under this type of sanitation system.
- **In sanitary privies:** These are actually unhygienic sanitation system and are used mainly by the EWS. About 2% to 3 % of households covered under it.

The sanitation system of the town is poor. The table below presents a service level standard of Tufanganj in terms of coverage of the city with respect to sanitation and sewerage.

Community toilet	-	8 nos.
Pay & Use public toilet	-	10 nos.
Types of sanitary in the municipal area	-	
▪ Septic Tank with soak pit	-	85%
▪ Septic Tank without soak pit	-	15%

Housing Typologies

As on September 2015, the population of Tufanganj was 23623 of which number of persons residing in slums are 10157, which is about 48.36% of the total population. As per the USHA total household in 54 slums are 2635 and as per demand survey for housing for all by 2022 undertaken as part of preparation of HFAPoA and validated by ULB and community, 1205 household living in semi pucca house and 1285 household living in kucha house. On the other hand 231 household are living in non-slum area having semi pucca and katcha house. Out of 231 household 104 household are living in Katcha House and 127 household are living in Semi-Pucca House. From present Demand Assessment survey for Housing for all (HFA), it is noticed that 2721 household covering under this project. Out of these 2721 houses, 2690 houses will be constructed through "Beneficiary-led-Construction" and 31 houses will be constructed through "Credit to Link Subsidy". Under "Beneficiary-led-Construction" each beneficiary will get 1.5 lakh from central assistance.

Physical Infrastructure profile

Water Supply

Present status of Demand & supply:

The population of Tufanganj Municipality according to 2001 census was 19310. Based on Socio-economic & Caste Census 2011 the tentative population of Tufanganj Municipality is 20999. This has been estimated to rise to 24697 in 2021 and will be around 29047 in the year 2031. The water demand according to that was 0.45 MGD (2001). Accordingly the Municipal Water Supply Department has calculated the projected demand to be 1.2 MGD in the year 2021 @ of 90 lpcd. Hence the gap is 0.75 MGD taking an average supply of 70 lpcd.

Extent of Coverage:

At present, the entire population within the Municipal Area is solely dependent on Ground Water. Though augmentation of water supply is going on, all the twelve wards are expected to be covered through the piped network by the existing ongoing project. Service levels: The total quantity of water supplied at present in Tufanganj Municipal area is approximately 70 liters per capita per day.

Existing System:

Source of Water:

This aspect mainly deals with the type of different source of water in the municipality. The necessity of this aspect is that since a development plan is for a plan period of five years, and is for the residents of the area, the planning needs to be done accordingly for the people of the area.

Table 7: Status of Water Supply service levels benchmark

Sl.No.	Indicators	Present status	MOUD Benchmark
1	Coverage of water supply connections	40%	100%
2	Per capita supply of water	35 LPCD	135 LPCD
3	Extent of metering of water connections	0 %	100%
4	Extent of non-revenue water	90%	20%
5	Quality of water supplied	100%	100%
6	Cost recovery in water supply services	10%	100%
7	Efficiency in collection of water supply related charges	10%	90%

Chairman

Tufanganj Municipality

Housing condition in its slums is not in good shape as 47.32% houses live in Katcha house. Considering the above, municipality has already initiated construction of beneficiary led houses in 54 slums spread over 12 wards on a piecemeal basis leveraging ISHDP scheme in a phased manner. In the First phase (2008-2012) total 308 houses were constructed in 50 slums spread over 12 wards. Infrastructure projects like Road, Drain and pipeline work were also completed.

PMAY(Housing for All): Tufanganj Municipality

lead a minimum standard of life. The population projection is important because the services and facilities provided by the municipality ought to increase at the same ratio as the population growth. The projected population in the next 5 to 10 year should have the infrastructure and the economic stability and social standing for a good and healthy life. Thus a systematic development of the basic infrastructure is the need of the day.

Table 2: Projected Population Tufanganj

1.4. Housing and Physical Infrastructure profile

Housing profile

48.36% of the households live in a house/hut with only one room in the district of Tufanganj Municipal area. In context of Tufanganj, 29.22% of households live in semi- pucca or partially pucca houses.

MED, CoWB

PMAY(Housing for All): Tufanganj Municipality

- To spread health awareness through various methods of communication not only to the beneficiaries of the Programme but also to the excluded groups and areas within the wards
- To ensure greater coverage of the services already provided from the Health Sub Centers.
- To introduce Health Management Information System and modern networking among the different health units
- Introduction of effective school health programme
- To ensure access to emergency services for all
- Better implementation of different national programme.

Education

Theme 1: Primary Education

- To ensure the demand for pre-primary, primary non-formal educational facilities.
- To upgrade the education quality provided in the Primary school with respect to student performance and teaching quality.
- Identification of the dropout and make them return to the school.
- Improvement of the status of infrastructure and basic services in primary schools within Municipal area.

Theme 2: Literacy

- Achieving higher enrolment of children in age group of 6-14 in the SSK centers and ensuring higher utilization.
- To ensure access for specific categories of children such as the girl child, minority community children, and physical and mental challenged children.
- To bring all the aged persons who have not gone under conventional education system in the Continuing Education Centers (CECs).
- Creating awareness in the community through the existing community structures (NHG, NHC, CDS members) on the importance of primary and adult education.⁶

Population and development are intrinsically interrelated and progress in any component can catalyze improvement in others. In recognition of this awareness the CDP seeks to integrate the population perspective with all development policies to be undertaken in the plan. The population statistics is provided below:

Table 1: Population of Tufanganj

Sl. No.	Item	Tufanganj
1	Total population (Census 2011)	20999
2	Decadal Growth (Census 2011) (%)	8.75
3	Density	8433

Source: Census of India, 2011

The combination of high population growth and density, poverty, and limited resources makes the developing urban areas distinctive as in the case of Tufanganj. This population will not only require additional area for settlement to keep the density in check but also increasing infrastructural facilities to

generated in this Municipal area were simply thrown in the vacant lands. The type of these wastes are mainly organic i.e. easily decomposable. Solid wastes collected from markets are used for dumping to fill up the low-lying areas.

But gradually with the increase in population, the quantity of generated wastes increased at an alarming rate. The use of non-biodegradable materials like plastics has multiplied the problems regarding disposal of solid wastes in the municipal area. As a result, to keep the environment healthy, from 1980, rats at different locations, dustbins, handcarts etc. came into existence.

For future there is a proposal for providing individual buckets to BPL families in slum areas. There is also proposal for door to door collection and finally dumped it to the trenching grounds. The municipality in near future shall establish a vermin-compost plant for processing of waste and proposal has been submit to MA Dept.

The future system of Solid Waste Management in general is based on the three consecutive systems of:

Sanitation

Since its inception, Tufanganj Municipality is concerned about the sanitation. Growing population demands better and modern sanitation facilities. Keeping this in view, 8 Nos. community toilets have been constructed in the Municipal area. Continuous efforts are making to improve the services further. However modernized sewerage system is in need within near future.

Health

The development objectives of health care delivery improvement plan under the different themes are as follows:

Theme 1: Public Health Services

- Exploring opportunities for strengthening decentralization and other public private partnerships in public health services
- Strengthening and development of Health Management Information System.
- Better co-ordination with State Government Hospitals and Sub-center for maintaining a better referral system
- Improve the asset and human resource utilization pattern of health services such as ambulance services

Theme 2: Reproductive and Child Health Care Services

- To establish quality antenatal care and institutional delivery to 100% women in Tufanganj Municipality.
- To ensure 100% immunization of infants against six killer diseases within 12 months of birth.
- Improve the package of health services for both APL and BPL population.

MED, CoWB

PMAY(Housing for All): Tufanganj Municipality

Agriculture: Jute, Rice, wheat, Cotton, Mustered seeds, are main agriculture product. Most of the land is non-irrigated and dependent on water. Infrastructural arrangement is very poor.

Industry: There is no big industry or medium size industry. In some village small and cottage industry is observed.

Socio Cultural facilities:

There are six schools with 10+2 facility – The higher education system in the town is little but resourceful. Students of these schools play stellar roles in every aspect. Also there is a college within the municipal area and one ITI has also been set-up last year. As well as there is one Polytechnic College . Apart from that one Novadaya Vidyalaya is running within the campus of Tufanganj Mahavidyalaya but in future final set-up shall be made at the Northern side of the town. There is one sub –divisional hospital –‘Tufanganj Mahakuma Hospital’. In the year 2006-2007 to ensure the basic health services to BPL & Poor citizen Health Sub-centres under SUDA Health Project (CBPHCS) has been initiated by the ULB sharing Govt. Health service providers.

Drainage

The drainage network of the Municipality is 97 km. in total length and is mainly of two types- Kancha and Pucca (Length of Kancha drain – 51.4 & pucca drain – 45.6km). The topography of the town helps very much in natural drainage. The major portion of the town is situated on a ridge which gradually slopes away on either side towards east and west where there are low lying areas. The soil is high permeable nature. The greater part of rain water is absorbed quickly by the ground itself and the remaining flows as surface run-off following the natural gradient. Tufanganj Municipality has constructed shallow surface drains on one side of the road which carry water and discharge the same into low lying area. In most of the slum there is no proper drainage network system. Low open area is to be filled and drainage network within the slum is to be designed. This system is to be connected to the main drain network of the ULB. This will require extension of drainage from 500m to 1000m outside slum.

Figure IMP 1: Pie Chart showing percentage of types of drains in the municipal area

Solid Waste Management

With the advent of the age along with population pressure region are facing huge problems regarding their various Infrastructure service. In the last century up to 70's the amount of solid wastes

PMAY(Housing for All): Tufanganj Municipality

Tufanganj Municipality
Chairman

City Profile and Overview

Historical Background:

This municipality has been come to its existence in the year of 1983 (10th Feb, 1983). Before this the town was controlled and administered by the Town Committee. First general election was held in 28th May 1995. Number of ward reduces sixteen to twelve in 1995 election. From the First election to present Subash Chandra Bhawal is chairman.

It has 12 wards & 2.49 Sq Km in area. The population is about 20999 at present as per census 2011 [Tentative] (19310 as per census 2001). This municipality has its all principle departments and running in a discipline manner. The people of the locality are very co-operative and friendly towards the activities of the Municipality. Tufanganj Municipal town is under the administrative Jurisdiction of Cooch Behar District. The Cooch Behar District in the State of West Bengal is situated at the extreme northeast corner of the state.

The Town Tufanganj is situated at a distance of 24 Kms. East of the District town.

Tufanganj Municipality is one of the remotest Municipalities and is the border district of Coochbehar. The area as whole is underdeveloped and is inhabited by poor people. A sizable population under this ULB lives below the poverty level. This municipality is earnestly trying to do all sorts of betterment with its poor resources.

Regional Setup:

The district geographically forms part of Himalayan Tarai of West Bengal the northern boundary and most part of eastern boundary of the District is bounded by Rongpur District of Bangladesh, and the eastern boundary is formed by the District of Dhubri of Assam.

Administrative Boundaries:

Total geographical area of the Municipality is 2.49 Sqkm. It is surrounded by the state of Assam in the East, Doors in the Northern side, Bangladesh southern part, Silihuri and Tufanganj in the western side of Tufanganj Town. It is well connected both economically and socially with the state of Assam.

Topography and Climate:

Tufanganj is a flat terrain area with a slight south eastern slope along which the main river of the subdivision flows. The gentle slope of Tufanganj is north to east direction. Most of the land is medium land. There are neither mountain peaks nor any hills in the subdivision. Soil is clay humus. The municipality is having annual rainfall of 3736mm/annum and the temperature varies from 35°C (max) and 7°C (min)

Soil: Soil in the locality is sandy and alluvial in nature and is best for rice, Jute, vegetable production. Gravel mixed sandy soil in the large areas of river verge remain un-used decades after decades.

Transport: The sub-division town is well connected with regional cities by state bus, private vehicle and nearest Rly. station at Tufanganj Town.

Occupation: Most of the people about 15% are fully depend on agriculture that is the primary sector. Next around 65 % of the population are engaged in secondary sector followed by the remaining in the tertiary sector.

Existing Slums Details

The environmental condition in the slums is poor. The slums lack basic civic amenities mainly drainage, thereby leading to water logging, mainly during rainy season. This has led to an unhygienic living condition in the slums. Most of the roads within slums are brick paved or kutchha road. Though there are sufficient streetlights available. Most of the population adopts unhygienic method for disposing their waste; thereby causing huge damage to health that ultimately leads to significant loss of man-days of work amongst others. Overall physical and social infrastructure is poor.

Migration

The growth of any urban area depends upon the various factors that in fact rule the growth pattern of the urban area. The growth depends upon various characteristics of an urban area.

Maximum dwellers have migrated from rural areas due to lack of employment in agriculture sector as well as better livelihood opportunities in urban area. Maximum no of household had migrated from rural to urban area. Majority of the population of this slum is living for more than 20 years in this slum. Hence, dwellers are now permanently depending on 54 nos slums. This justifies as a parameter on the importance of Slum for the Beneficiary Led Construction.

Housing Status

Houses in the slum areas are in usually temporary in nature, without a permanent roof structure.

Housing is the constituent of the social infrastructure of the economy. Like the other constituents, such as the system of education and health, housing also can either reduce or enhance the disparities in the society. The total number of dwelling units in the slums are 592 of which 319 are kacha houses.

House Type / Structure(2015-2016)

Total				228	319	547

Most of the dwelling units have mud flooring closely followed by cement flooring. Firewood is the major source of cooking fuel in majority of the slum household.

Physical Infrastructure:

Infrastructure is the basic requirement of urban life and its adequacy and accessibility are two important ingredients and key contributors in the up gradation and enrichment of quality of urban life which is the primary objective of any planned development effort. These infrastructure facilities are broadly classified into two aspects:

Physical infrastructure: Water supply, Drainage, Solid waste, Roads, Electricity.

Social infrastructure: Health, School, Community Hall, Lively Hood Centre

Status of Physical Infrastructure(2015-2016)

Saroj Mukherhee Colony	
Physical Infrastructure	Status
1. Connectivity to City-wide Water Supply System	Partially connected
2. Connectivity to City-wide Storm-water Drainage Supply System	Partially connected
3. Connectivity to City-wide Sewerage System	NII
4. Whether the slum is prone to flooding due to rains	No
5. Frequency of garbage Disposal	Once in 2 days
6. Arrangement for garbage Disposal	Municipal staff
7. Frequency of clearance open drains	Once in 15 days
8. Approach Road/Lane/Constructed Path to Slum	Non- Motorable Pucca and few are Non -Motorable kutcha
9. Distance from the nearest Motorable road	Less than 0.5 km
10. Internal Road	Non-motorable pucca
11. Whether Street light facility is available in the Slum	Yes
Sutradhar Colony	
1. Connectivity to City-wide Water Supply System	Partially connected
2. Connectivity to City-wide Storm-water Drainage Supply System	Partially connected
3. Connectivity to City-wide Sewerage System	NII
4. Whether the slum is prone to flooding due to rains	No
5. Frequency of garbage Disposal	Once in 2 days
6. Arrangement for garbage Disposal	Municipal staff
7. Frequency of clearance open drains	Once in 15 days

10.Internal Road	Non-motorable pucca
11.Whether Street light facility is available in the Slum	Yes

Majority of the household uses public taps for water supply. The situation of water supply in the slum is poor. There are presently two water tap only.

Storm Water Drains

Sewerage system is not available at Tufanganj Municipality. Drainage system as available is at per. Disposal of storm water/ Sullage disposal drain/ culverts are insufficient. Stagnant water has been observed at many places in and around the slum.

Solid waste

At Solid Waste Management system in the slum is mainly done by the ULB. The waste which is generated is collected daily. The drains are cleared by the local people once in a week.

Roads

Approach roads to the slums are motor able but roads within slum are in dilapidated condition.

Roads in front of premises			
Motorable Pucca	Motorable Katcha	Non Motorable Pucca	Non Motorable Katcha
40%	25%	25%	10%

Electricity

Majority of the household (100%) have electricity connections, the street lights are maintained by the Municipality.

Literacy level

It is observed that 152 of the population are illiterate. Literacy of the female population is less than that of the male.

The Supply Demand Gap and Requirements

Particulars

Requirements

Housing: Dwelling Unit provision for Households with standard provisions:

- 1 Multipurpose Room
- 1 Bed Room
- 1 Kitchen
- 1 Toilet
- 1 W.C

Physical Infrastructure Requirement:

Standard Infrastructure Provision for

- Water Supply
- Drainage
- Roads

Project Development Option

In-situ redevelopment and whole of the project will be addressed in the project

Proposed Development

Based on preliminary understanding, the following components are being proposed

Housing Units [Single storied in situ].

- Standard Physical Infrastructure to be provided in the form of Circulation of Water Supply Drainage, Roads.

Innovations proposed in Project Planning Background

Housing activities are known to have the capacity to play a significant role in social-economic development, because they help not only in creation of shelter for the people by also in generating employment opportunities for a large variety skilled and unskilled work force which is a prerequisite for growth and development of settlement. A considerable section of the people without land are in a still worse position as housing schemes for the poor have hither to been targeted on paper but not applied in practice. Both the serviced land and shelter have become beyond the reach for half of the population- hence formation of slums, encroachments, informal colonies and unauthorized constructions. No land is earmarked for Economically Weaker Sections and Low Income Groups in Master Plan. The population density norms are required to re-look to enable better utilization of valuable land, as certain areas in the city. This growing slum population and the lack of basic facilities like water and sanitation will badly impact on overall development and prosperity of urban centres like Municipality.

To overcome the existing situation and to promote planned development the following innovative strategies can be adopted for the improvement of the city.

- To ensure that housing, along with the supporting services is treated as a priority and at par with the infrastructure sector.
- Forging strong partnerships between private, public, and cooperative sectors to enhance the capacity of the construction industry.
- Organizing public consultations to meet the special needs of slum dwellers.
- Promotion of livelihood for the slum dwellers.

Situation Appraisal & Key Intervention for Identified Slum

Presently accessibility to water supply facilities in the slum pocket is inadequate. The major source of water is from the common tap water available in the slums. The slum is partially connected to the municipal water supply main.

It is now proposed that water pipeline shall be provided in each household with requisite number of taps, as computed during the survey as felt needs shall be provided under this Project. However, considering that the houses are being provided with water, the provisions of multiple taps have not been encouraged and kept to the minimal level.

Design of distribution system was carried out on the following basis:

- ☐ Population projection
- ☐ Project horizon years
- ☐ Design period for various project components
- ☐ Per capita water supply
- ☐ Factors affecting consumption

- ☐ Existing water supplies
- ☐ Pipeline pressure requirement
- ☐ Economical size of conveying main
- ☐ Choice of pipe materials
- ☐ Peak factor
- ☐ Residual pressure
- ☐ Hydraulic zoning

Design Period for various Project Components

Water supply projects are designed normally to meet the requirements over a period of 30 years after their completion. The time lag between design and completion of the project should also be taken into account which should not exceed two to five years depending on the size of the project. CPHEEO guidelines have been followed has suggested the design period for various water supply components.

Service Plan

The pipelines needs to be regularly and kept in full working conditions. It is proposed that operation and maintenance of these pipelines and other assets be done in conjunction with the maintenance programme of the Municipal Corporation. The Bustee Working Committee shall be the first level of responsibility for ensuring that the pipelines etc are kept in good order. The overall operation and maintenance shall be carried out by the project cell of the Municipal Corporation.

Proposed Interventions

According to the above, the water supply design requirement for Municipality has been fixed at 135 lpcd (Domestic Requirement) + 15% (head loss) + $100 \times (p^{0.5}) = 163.25 \text{ lpcd (approx)}$.

There is existing water supply scheme which has the capacity for meeting the requirement. Thus there is no additional requirement of any reservoir. There are street stand posts for the slum proposed. But to achieve house connection at slum 100 mm dia. DI pipes are proposed.

The details of water supply lines provide are as follow:

Transmission of Water

Tufanganj Municipality has water supply through OHR having water supply. For the proposed multi-storied buildings sump and pump with OHR is provided for each building. The water supply network for this slum will be connected to the citywide water supply network.

Water supply system broadly involves transmission of water from the water supply main to the area of consumption normally through pipelines. Pipelines normally follow the profile of the ground surface quite closely, normally at 1 metre below ground.

Following design criteria are adopted for this project:

- ☐ Gravity pipelines have to be laid below the hydraulic gradient.
- ☐ Pipes are of Ductile Iron, Mild steel, GRP, HDPE, uPVC, Plastic etc.
- ☐ The design of water supply conduits is dependent on pipe friction, available head, velocity allowable, etc.
- ☐ There are a number of formulae available for use in calculating the velocity of flow.

However,

- ☐ Hazen William's formula for pressure conduits and Manning's formula for free flow conduits are popularly used.

Drainage and Solid waste management

Proposal

The status of adequate Drainage has a close and direct link with environment, water supply and its cleanliness, health and hygiene. The problem of adequate drainage associated with steep influx of population in urban areas, therefore needs to be addressed forth with, debated and deliberated at length, by the policy planners for the development of urban/city areas. Inadequate Drainage results in accumulation of stagnant water and is a major health hazard for the people living in the region.

In the slums there is no proper drainage system and hence stagnation of water is a common occurrence for the slums. In order to improve the situation, there is a need for constructing pucca drains, which will dispose of the stagnant water to the main drains.

Outcome

The proposed drainage system by means of construction of new drains and improvement of existing will help to provide relief to the slum dwellers by means of efficient and effective disposal of storm water through the outfall channels. The outcome of this scheme will by and large enhance the quality of civic life by way of promotion and safeguarding the public health and environmental pollution.

Assessment Overall State of Infrastructure

One of the priority area identified for Wood Industries slum has been absence of adequate drainage. Most of the drainage is kutchra and inadequate for covering the slums which had led to water logging which in turn affected the environment and health of the people on an overall basis.

As mentioned above poor drainage system and consequently chronic water logging are the major issues of concern. There is hardly any pucca drain. The state of drain also affects the condition of the road.

Though there are storm water drains on the main road around the slums, but there is no systematic connection with the internal areas of the slum, thereby leading to acute water logging within the slum. It is worth mentioning that apart from lack of drainage network in several slum pockets, major challenge lies with its maintenance. In numerous cases drains in slums gets choked due to improper disposing of solid waste and other hazardous materials into the existing drains.

Situation gets beyond control particularly during monsoon season like July and August. Accumulated water causes to generate public health problems. Haphazard growth and settlement in the slum area

has blocked the natural drainage courses, which in turn causes water logging and stagnation in different parts of the slum.

Proposed Interventions

It is thus proposed to have an integrated drainage programme covering the slum pocket. The programme shall envisage construction of pucca drain throughout the road length and installing a maintenance programme to ensure that the drains are kept free from clogging from plastics and other materials. Depending on the availability of space and requirement, a sections have been designed, Designs of which have been provided in the relevant sections.

Road Infrastructure

Proposal

A key component of the Proposal is a focused initiative to provide strong connectivity and provision of movement in the slums. This will enable the poor people to benefit from greater mobility and would increase their employment opportunities, open up trading and marketing of products, and important improve access to health, education, and other social services.

Roads in the slum are highly undeveloped and ill maintained. Poor roads are strong barrier to the development of the slums. Poor road condition and absence of road facility in several slums makes life difficult for all slum dwellers, especially, women and children. It also hampers prompt movement of sick; particularly those who require urgent medical attention. Lack of maintenance, coupled with poor drainage makes life even worse during monsoon season. Road are rarely re-built or re-paired periodically due to several reason. Provision of basic quality road is thus an important element of slum development. The existing road network system of the slum has become inadequate to cope up with the present and ever increasing needs. In order to bear the additional pressure due to enhanced civic, economic and commercial activities of the slum, existing road network system in several places are required either to be up-graded or winded and new roads are also be constructed in a number of places where the network is inadequate.

Proposed status and strategy

The existing condition of the road is poor and cause great hardship to the slum dwellers particularly women and children. The existing roads in the slum areas are predominantly made of brick pavement. These roads are substantially worn out. The lane roads are Kutcha roads. These roads are highly vulnerable and are in a poor condition particularly in rainy season

One of the major issues is absence of proper maintenance. In view of this it is proposed that the entire road network is to be converted to concrete pavement as concrete pavements are durable and easy to maintain.

The Road needs to be maintained. It is proposed that operation and maintenance and servicing of these roads be done by the Municipality. The Bustee Working Committee shall be the first level of responsibility for ensuring that the pipelines etc. are kept in good order. The project cell of the Municipal Corporation shall carry out the overall operation and maintenance.

Proposed Intervention

All the proposed roads are rigid pavement-cement concrete roads. Rigid pavements are those which possess noteworthy flexural strength. The concrete pavement slab can very well serve as a wearing surface as well as effective base course. Therefore usually rigid pavement structure consists of a cement concrete slab, below which a granular base or sub base course may be provided. Rigid pavements are generally designed and the stresses are analyzed using elastic theory, assuming pavement as an elastic plate resting over elastic or a viscous foundation.

Construction of granular sub-base (GSB) 100 mm thick. Construction of 100 mm thick cement concrete pavement.

Outcome

After successful implementation of the scheme the slum dwellers will have facilities like pre-school education, adult education, non-formal education and social, recreational activities in the slum area. The community centres would provide the people to gather in, to meet and discuss their problems. It is not just a physical location but a space; where poor people could own, develop their thoughts and also could contribute their own skill and labour to make their dream come true. It will also provide the Municipal Corporation in networking with the urban poor communities in order to exchange information and views.

Definition of Slum for Housing:

Different definitions of a slum exist in different statutes and in urban poverty literature. For the purpose of HOUSING SCHEME, it is proposed to adopt the definition given in the 2001 Census, which is as follows:

- a. All areas notified as 'Slum' by State/Local Government and UT Administration under any Act;
- b. All areas recognized as 'Slum' by State/Local Government and UT Administration, which have not been formally notified as slum under any Act;

'Slum' or 'Slum Area'— is a compact settlement of at least 20 households (For NE & Special Category States it is 10-15 households) with a collection of poorly built tenements, mostly of temporary nature, crowded together usually with inadequate sanitary and drinking water facilities in unhygienic conditions.

Situation Appraisal

The people living in the slums mostly have kutcha and semi-pucca housing. In certain cases where pucca housing is available, they are usually in dilapidated condition. The kutcha houses are in very poor condition and require extensive repairs. Most of the houses have tiles on roof. While during the survey some of the houses have been noted to be in average condition, the quality of these houses is also speedily deteriorating.

Proposed Intervention

In line with the vision to 'housing for all', an integrated housing programme is proposed to be implemented. The target will be all the slum dwellers in the pocket. In situ single dwelling units are proposed.

Building type	Number of DU
In situ single Unit	1210 nos. within 64 slums and 80 nos.17 non slums

Building Plan

The buildings are proposed to cover an area of approximate 32.18 Sq.mt along with provision of 2 rooms, kitchen and sanitation facility. The layout, size and type design of housing dwelling units depends on the local conditions and the preferences of the beneficiary. The houses, has been designed in accordance with the desire of the beneficiaries, keeping in view the climatic conditions and the need to provide ample space, kitchen, ventilation, sanitary facilities, etc. and the community perceptions, preferences and cultural attitudes.

In line with the scheme, carpet area of the house will be not less than 25.37 sq. mts and preferably two room accommodation plus kitchen and toilet should be constructed.

Building material

- ☐ PCC (1:3:6) for foundation
- ☐ RCC M-20 for substructure & superstructure (Column, Beam, Slab)
- ☐ HYSD Steel

- ☐ 1st class Brick Masonry
- ☐ 1:6 (Cement: Sand) plaster – 10 mm on soffit of beam & slab, 15 mm on internal walls & 20 mm on external walls
- ☐ IPS flooring

Structural Design

- ☐ Following are the general considerations in the analysis/design.
- ☐ For all structural elements, M20 grade concrete and Fe 415 grade of steel is used.
- ☐ Plinth beams passing through columns are provided as tie beams.
- ☐ Pedestals are proposed up to ground level.
- ☐ Beam Centre-line dimensions are followed for analysis and design.
- ☐ For all the building, walls of 250 mm and 125mm thick with 20 mm External plaster and 12 mm thick internal plaster are considered.
- ☐ Seismic loads are considered acting in the horizontal direction along either of the two principal directions.

Design data

- ☐ Live load: 2.0 kN/m² at typical floor
- ☐ 1.5 kN/m² on terrace (With Access) : 0.75 kN/m² on terrace (without Access)
- ☐ Floor finish 50mm (0.05*24) = : 1.2 kN/m²
- ☐ Ceiling plaster 12mm (0.012*20.8) : 0.25 kN/m²
- ☐ Partition walls (Wherever Necessary) : 1.0 kN/m²
- ☐ Terrace finish: 1.5 kN/m²
- ☐ Earthquake load: As per IS-1893 (Part 1) - 2002
- ☐ Depth of foundation below ground: ,0.7 m
- ☐ Walls: 250 mm thick brick masonry walls at external and 125mm walls internal.

Reference codes:

- ☐ IS 456: 2000 - Code of practice -Plain and Reinforced concrete.

- IS :1893 :2002 - Criteria for Earthquake resistant design of structures(Part-1)
- IS: 13920: 1993 - Ductile detailing of Reinforced concrete structures subjected to seismic forces.
- SP: 34 - Hand Book on Concrete Reinforcement and Detailing.
- S: 875: 1987 - Code of practice for design loads (other than earthquake) for buildings and structures. (Part-2)

Identification of Beneficiaries

Municipality Municipal Corporation, in consultation with State Urban Development Agency (SUDA), will approve the phasing of the beneficiaries in the region. The beneficiaries so identified and the projects so prepared shall be done in consultation with the committees and community development societies already existing in that particular city. The identification of beneficiaries will be on the basis of the baseline survey already conducted under PMAY Demand Survey.

Allotment of Houses

Allotment of dwelling units will be in the name of the female member of the household. Alternatively, it can be allotted in the name of husband and wife jointly. Ownership of land required for every Beneficiary.

Town Planning Norms

Up-gradation of existing constructions and construction of new houses shall only be taken after approval of the lay out by the urban local body. Respective State Govts. may relax some town planning norms for sanction of such layout Plans, to facilitate HOUSING SCHEME, however, minimum acceptable standards of Town Planning will need to be set and followed.

All planning are done as per UDPFI & CPHEOO guidelines and local Municipal Bye-laws.

Compliance with Municipal Bye laws

All designs & drawings are created keeping in line with the municipal bye laws.

Tenure

Unlike rural areas, land is scarce in urban areas particularly in large metropolises. Under HOUSING SCHEME, the responsibility for providing land for the project rests with the State Government or its agencies.

Summary of Investment

Project Costing

The costing for the individual sectors has been made on the basis of applicable Schedule of Rates. The details of each of the sub-projects have been provided in the respective sections.

The cost components include:

Infrastructure: Cost of infrastructure development/up-gradation including water supply, storm water drainage, roads (BT & CC) & drainage, etc.

Housing: Construction Costs would need to be arrived from the various components that are proposed to be implemented and would vary depending on the development option identified.

GOI Contribution:

PMAY scheme guidelines stipulate that, 1.5 lakhs of the unit cost of Dwelling unit.

The Central share would be available as per milestones set out in Memorandum of Agreement (MoA).

Beneficiary Contribution:

In order to ensure beneficiaries interest, financial contribution by the beneficiaries is critical.. The share of beneficiary contribution in housing is proposed to be a minimum of 25000/-. As per PMAY guidelines no contribution from the beneficiaries is expected in infrastructure improvements.

State Contribution:

The decision would be left to the remaining share would have to be arranged by the State. State will contribute 5% of total Dwelling cost for infrastructure.

ULB Contribution:

ULB have no contribution on dwelling unit cost. ULB will contribute 5% of total Dwelling cost for infrastructure.

In the 1st Meeting of SLSMC of West Bengal it has been decided that the following funding pattern should be adopted for implementation of PMAY until further revision.

Type of City/Towns as per 2011 census	Component	Contribution of			
		Centre Rs.(Lakhs)	State Rs.(Lakhs)	ULB Rs.(Lakhs)	Beneficiaries Rs.(Lakhs)
Total cost of Beneficiary LED Construction	Housing	1.5	1.92858	Nil	0.25
	Infrastructure	Nil	5%	5 %	Nil

Project Cost and Financing Strategy

For Dwelling Unit

Total no of Dwelling unit = 478 Nos

Rate per Dwelling unit = 3.68 Lakhs

Total Cost of Dwelling unit = $478 \times 3.68 = 1759.04$ Lakhs

Central Share = 478×1.5 Lakhs = 717.00 Lakhs

State Share = 478×1.93 Lakhs = 1010.49 Lakhs

Beneficiary Share = 478×0.25 Lakhs = 119.5 Lakhs

ULB Share = NIL

For Infrastructure

10 % of total Dwelling unit cost = 1759.04 Lakhs $\times 10\% = 175.90$ Lakhs

Central Share = NIL

State Share = $50\% \times 175.90$ Lakhs = 87.95 Lakhs

Beneficiary Share = NIL

ULB Share = $50\% \times 175.90$ Lakhs = 87.95 Lakhs

The total project cost will be 1934.94 lakhs

Out of these Rs 1934.94 lakh Rs 175.90lakh is the cost of Housing Infrastructure. The following table shows the share of cost between housing infrastructure & Physical Infrastructure.

Table: Project Cost For Infrastructure details are given below:

Institutional Capacity

Municipality Municipal Corporation, with its elected local body in place, has developed institutional strength to implement, operate & maintain proposed infrastructure. The Municipality spreading over an area of 12.95 square kilometres is comprised of 25 wards. With efficient and trained manpower, the Municipality has developed both technical and administrative skills. The development of appropriate municipal organizational structures with qualified staff is essential if municipalities are to provide cost effective services to citizens. With local government reform municipalities are required to take on new tasks, and provide new services. This will only be possible if municipalities have cost-effective and appropriate structures and staff that are well qualified and highly motivated. The municipalities should plan in such a way so as to ensure that they can meet the needs of citizens effectively and efficiently.

Chairman
Tufanganj Municipality

The Municipal Corporation is entrusted with the responsibilities of providing the following civic services and infrastructural facilities to the citizens:

- Solid Waste Management
- Birth and Death Registration
- Crematoria and burial ground
- Prevention of food adulteration
- Preventive Health Care and Health Care
- Services
- Roads and its development
- Widening & improvement to roads
- Street Lighting
- Bus Stands, Public Urinals
- Town Planning
- Slum Improvement and Urban Community
- Education
- Water
- Beautification
- Auditoriums
- Markets
- Storm Water Drainage

DETAILED ESTIMATE FOR THE CONSTRUCTION OF SINGLE UNIT DWELLING HOUSE

Pradhan Mantri Awas Yojana Housing For All (Urban)

Total Covered Area- 32.58 sq.m (With Electrical Works)

Reference of Schedule of Rates : PWD (W.B.), Schedule of Rates Building & Sanitary w.e.f-01.07.2014 & Corrigenda

Floor Area 25.77 sqm
